About Me

I am ambitious and hardworking student who wants to gain experience while studying at University. I'm learning Flutter for the past 2 years. I'm very passionate about app developing. I create my own flutter projects. You can see all of them in my github account. I like to learn new things so in my spare time I'm taking extra courses about Java Programming. I'm confident in frontend and interface design. I can use Mvvm, State Management, Firebase, GetX, MobX. I look forward for new challenges.

In the future I see myself as a successful mobile developer
